Artificial Intelligence (AI) Policy

New Note Projects is known for innovation. We launched the world's first recovery orchestra and were awarded Nesta's New Radicals award in 2016. And so, with AI now being part of everyday life, but with the implications of using it still in a space of legal and ethical uncertainty, we're naturally curious, but cautious.

WE WILL:

- Explore the opportunities AI tools may give us to innovate and make our operations more efficient
- Be transparent about our use of AI
- Use AI mindfully, acknowledging that it is not perfect because:
    - It may be biased
    - It may give us inaccurate information
    - It may use the intellectual property of others
    - It has an environmental impact

WE WILL NOT:

- Replace human judgement with AI-generated responses
- Share personal or sensitive information with AI tools without robust data privacy controls in place
- Use AI to make decisions about who we support or who we work with
- Use AI generated content as a core part of any of our creative output, other than augmenting original works of human creativity
